UNIT - II
POVERTY AND UNEMPLOYMENT
घटक:- २ - दारिद्र्य आणि बेरोजगारी
2.1- POVERTY - दारिद्र्य

प्रास्ताविक:-

दारिद्र्य हा भारतीय अर्थव्यवस्थेतील प्रदीर्घ काळापासून अस्तित्वात असलेला आणि अनेक उपाय करूनही लवकर बरा न होणारा असा दुर्घर रोग आहे.

हजारो वर्षांपासून आपला देश व देशवासीय दारिद्र्यात खितपत पडलेले आहेत. दारिद्र्य म्हणजे उत्पन्नाचा अभाव होय.

परंतु आर्थिक व सामाजिक विकास विचारत घेताना दारिद्र्य ही संकल्पना फक्त उत्पन्नाशी संबंधित नसून त्यापलीकडे चांगले सामाजिक जीवन, चांगले शिक्षण, आरोग्य, राजकिय स्वतंत्र आणि अशा अनेक बाबीशी निगडित आहे.

Lichens

- Lichens are very peculiar group of plants as they are composites. The thallus of Lichen is formed of two quite different organisms known as a fungus(a mycobiont) and an alga(a phycobiont). The mycobiont belongs to Ascomycetae or Basidiomycetae, while the phycobiont generally a unicellular alga.

SetTheory ppt - Google Slides

Basic properties of sets

- Sets are inherently unordered.
No matter what objects a , b , and c denote.
 $\{a, b, c\} = \{a, c, b\} = \{b, a, c\} = \{b, c, a\} = \{c, a, b\} = \{c, b, a\}$.
- All elements are distinct (unequal);
multiple listings make no difference!
 $\{a, b, c\} = \{a, a, b, a, b, c, c, c, c\}$.
This set contains at most 3 elements!

Distributions

Recall that an integrable function $f: \mathbb{R} \rightarrow [0,1]$ such that $\int_{-\infty}^{\infty} f(x)dx = 1$ is called a *probability density function* (pdf). The *distribution function* for the pdf is given by

$$F(x) = \int_{-\infty}^x f(z)dz$$

(corresponding to the cumulative distribution function for the discrete case).

Sampling from the distribution corresponds to solving the equation

$$x = \int_{-\infty}^x f(z)dz$$

for example given random probability values $0 \leq x \leq 1$.

1. Uniform Distribution

The pdf for values uniformly distributed across $[a,b]$ is given by $f(x) = \frac{1}{(b-a)}$

Sampling from the Uniform distribution
